Profile

My name is Jasin Tairaidrissi, a frontend developer and UI/UX designer from Amsterdam with over 15 years of experience in crafting user-friendly and visually appealing digital solutions.

Recently, I shifted my focus toward frontend development, specializing in React, after successfully completing a bootcamp at NOVI University of Applied Sciences in Utrecht.
My extensive experience as a UI/UX designer enables me to work seamlessly between design and development, and I thrive on projects where functionality and aesthetics come together.

Throughout my career, I've collaborated as a designer with leading clients, including ABN AMRO, McDonald's, and Philips, which has strengthened my ability to work with teams and deliver high-quality digital products. I continuously strive to grow and challenge myself, both professionally and personally, with the goal of creating the best possible solutions.

I am open to new challenges and collaborations, so feel free to reach out if you're looking for a passionate developer with a keen eye for design.
